UNDER VEHICLE SEARCH SYSTEM

UNDER VEHICLE SEARCH SYSTEM

MODEL : UNDER VEHICLE SEARCH SYSTEM

It consists of color Camera with IR. The camera adapts to low light conditions. It's able to change from color to greyscale in low light. Camera can be manually moved for 360-degree tilt. It comes with high resolution LCD screen with 12V DC with charger. The charger is made to withstand fluctuation from 90V to 270V with adequate battery protection. Telescopic extension extending upto 180cm, with non-rotational, lightweight aluminum pole with rubber grip and arm-rest. The system is modular, designed to allow the operator to quickly change from under vehicle search mode to pole cam mode (in practice no tools should be required to change from one mode to another). Manual swivel and tilt function makes it easy for the operator to point the camera in any direction off the end of the pole.
